REPORT (Digital literacy)

Course: CSE0001 – Digital Literacy

Student Name: Vishwasimha

Program: B.Tech CSE(AI/ML)

University: Vellore Institute of Technology (VIT), Bhopal

Digital Literacy Project Report: -

Introduction:

This report documents my work for the Digital Literacy project. Throughout this course, the goal was to understand how to safely and professionally navigate the digital world. Over five specific tasks, I worked on everything from creating educational infographics to setting up my professional coding profiles and understanding how online financial frauds happen.

Task 1(Infographic):

Digital Literacy Awareness Infographic For this task, I utilized Canva to design a comprehensive, one-page educational infographic. The objective was to visually break down the four main pillars of digital literacy in a way that is easily digestible for my peers. I focused on maintaining a clean, professional design aesthetic while ensuring the information regarding online safety, digital communication, information verification, and digital problem-solving was straightforward and actionable.

Task 2(Student Digital portfolio):

Student Digital Portfolio For this task of my Digital Literacy project, I established my professional digital presence by setting up and optimizing profiles on GitHub, LinkedIn, and Kaggle. I chose these specific platforms because they represent industry standards for version control, professional networking, and data science collaboration. On LinkedIn, I updated my education section to reflect on my current B.Tech studies at VIT Bhopal, which will help me connect with the global academic community and potential internship coordinators. My GitHub profile now features a personalized README repository that highlights my academic branch and my specific learning goals in software development. Lastly, my Kaggle account will serve as a hub for my future machine learning projects and competitions. Maintaining a professional digital presence now ensures that my academic achievements are visible to the tech community as I progress through my degree.

Task 3(Platforms):

Coding & Collaboration Platforms, For this task, I explored essential platforms for technical skill-building and cloud-based collaboration. I completed a beginner-level coding challenge on HackerRank, which introduced me to the structured environment of competitive programming and the importance of logic-building. Additionally, I utilized Google Workspace to develop a "Digital Literacy Awareness Quiz" using Google Forms. This five-question quiz was designed to test my peers' knowledge of online safety, professional etiquette, and essential student tools. I also linked the form to a Google Sheet to practice managing real-time data responses. These tools are invaluable for my academic journey at VIT Bhopal, as they provide the infrastructure needed for both individual technical practice and effective team collaboration on group projects

Task 4(Professional Communication):

. In this section, I focused on how to communicate properly in an academic and professional setting. I drafted two formal emails: one to a professor asking for clarification on an assignment, and another to a hiring manager asking about summer internships. Writing these helped me understand the right tone to use, like including a clear subject line and a proper sign-off. Along with the emails, I created a social media & Digital Footprint Checklist. I did a quick audit of my own online presence and made sure my personal accounts are set to private so I can keep my personal life separate from my professional career.

Task 5: Cybercrime Case Study

The final task dealt with cybersecurity. I researched and wrote a case study on the UPI "Collect Request" scam. I chose this specific crime because college students are huge targets for it, especially when buying or selling used items online. I broke down how scammers rush victims into entering their UPI PIN under the false promise of receiving money, which actually drains their bank account. To wrap up the project, I also put together a quick prevention checklist highlighting simple rules, like never entering a PIN to receive money and turning on Two-Factor Authentication (2FA) for social media accounts.
